# Introduction Target group & Applications

#### **DM62 Introduction**

This is a special 2200 W core drilling motor with 2-speed oil-bath gearbox which is primarily for dry drilling up to 162mm in reinforced concrete, but which can also be used for dry drilling up to 262mm in materials such as brick. While dry drilling of brick is very common, dry drilling of reinforced concrete is a relatively new technology which has only been made possible by new types of core bits. This tool is specifically designed to optimally perform with these new bits.

The gearbox features a mechanical clutch and employs switchable soft percussion function which assists in drilling efficiency. This tool must always be used together with a vacuum cleaner. It can be used either hand-held or mounted to a drill stand, but we recommend to always use it on the drill stand when drilling reinforced concrete. With its all metal construction, it is built for heavy duty operation.

### **Target Groups and Applications**

The DM62 is an excellent choice for operators who need to drill in situations where water cannot or should not be used, such as in occupied buildings or in constructions where there is a combination of wood and stone. New advances in the development of dry drill bits now allow for easy drilling in a variety of building materials from reinforced concrete to brick.

The DM62 serves many applications that require drilling into reinforced concrete as well as into brick, silicate stone, and concrete blocks. It is designed to meet the requirements of new building standards imposed for the protection of the climate, requiring many cut-outs for the installation of ventilation equipment and air conditioning. The DM62 is also ideally suited for drilling companies preparing recesses for electrical outlets and light switches for industrial electricians. In addition, dry overhead drilling with the DM62 is much lighter, faster and just as precise when compared to wet drilling.

The DM62 is a useful addition to the equipment of specialist drilling companies and general construction companies, or anyone who needs an intensive-use dry drill motor for both reinforced concrete and brick.

## **Sales Arguments**

**Switchable Soft Percussion**Keeps diamond segments sharp and assists the general efficiency of the dry drilling process.

**Heavy-Duty Gearbox**Oil bath, 2-speed gearbox with mechanical clutch for heavy-duty use.

**LED Load Indicator**LED load indicator to give the operator reliable guidance on load conditions.

Anti-Seize Ring
Standard equipment anti-seize ring
prevents the bit from becoming stuck
on the spindle.

**Special Dustproof Switch**Hall Effect Switch is completely dustproof, and is even waterproof.
Includes anti-restart function.

**Spirit Levels**Vertical and horizontal Spirit Levels
allow operators to
create precisely aligned holes

# **Technical Specification**

Conclusion

The AGP offers the best combination of features and performance to work in the widest range of sizes and includes useful touches, such as the LED load indicator, standard anti-seize ring, soft-grip handle and dustproof/waterproof switch. This gives the maximum value to the end user.
